Specific Recommendations for Mounting the Drive in an Enclosure

Ventilation

To ensure proper air circulation in the drive:

- · Fit ventilation grilles.
- Ensure that there is sufficient ventilation. If there is not, install a forced ventilation unit with a filter. The openings and/or fans must provide a flow rate at le

- Use special filters with IP 54 protection.
- Remove the blanking cover from the top of the drive.

Dust and Damp Proof Metal Enclosure (IP 54)

The drive must be mounted in a dust and damp proof enclosure in certain environmental conditions: dust, corrosive gases, high humidity with risk of condensation and dripping water, splashing liquid, etc.

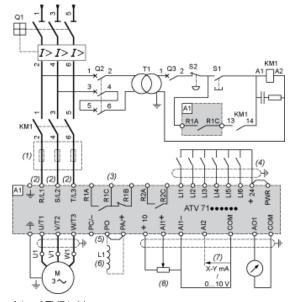

This enables the drive to be used in an enclosure where the maximum internal temperature reaches 50°C.

Power Terminal Connections for the Drive Combined with a 400 kW Motor

- To circuit-breaker.
- Line chokes, these are mandatory for ATV71HC40Y...HC63Y drives, to be ordered separately.
- (2) (3) DC chokes supplied as standard with ATV71HC40N4, HC50N4 drives. Not available for ATV71HC40Y...HC63Y.
- To DC bus +

Derating Curves

The derating curves for the drive nominal current (In) depend on the temperature and the switching frequency. For intermediate temperatures (e.g. 55°C), interpolate between 2 curves.
