Mounting Recommendations

Depending on the conditions in which the drive is to be used, its installation will require certain precautions and the use of appropriate accessories.

Install the unit vertically:

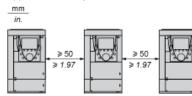

- Avoid placing it close to heating elements
- Leave sufficient free space to ensure that the air required for cooling purposes can circulate from the bottom to the top of the unit.

Clearance

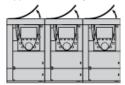

Mounting Types

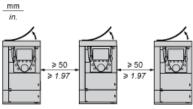

Type A Mounting

Type B Mounting

Type C Mounting

By removing the protective blanking cover from the top of the drive, the degree of protection for the drive becomes IP 20.

The protective blanking cover may vary according to the drive model (refer to the user guide).

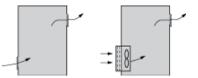

The protective blanking cover must be removed from ATV 71P ••• N4Z drives when they are mounted in a dust and damp proof enclosure.

Specific Recommendations for Mounting the Drive in an Enclosure

Ventilation

To ensure proper air circulation in the drive:

- Fit ventilation grilles.
- Ensure that there is sufficient ventilation. If there is not, install a forced ventilation unit with a filter. The openings and/or fans must provide a flow rate at least

- Use special filters with IP 54 protection.
- Remove the blanking cover from the top of the drive.

Dust and Damp Proof Metal Enclosure (IP 54)

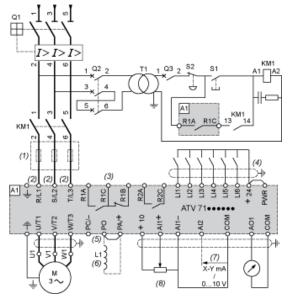

The drive must be mounted in a dust and damp proof enclosure in certain environmental conditions: dust, corrosive gases, high humidity with risk of condensation and dripping water, splashing liquid, etc.

This enables the drive to be used in an enclosure where the maximum internal temperature reaches 50°C.

- L1 DC choke
- Q1 Circuit-breaker
- S1 Emergency stop button with 2 N/C contacts
- S2 Run button
- (1) Power supply: 24 Vdc or Vac, 115 Vac, 230 Vac.
- (2) Requests controlled stopping of the movement and activates the "Power Removal" safety function.
- (3) Line choke (three-phase), mandatory for ATV71HC11Y...HC63Y drives (except when a special transformer is used (12-pulse)).
- (4) S2: resets XPS ATE module on power-up or after an emergency stop. ESC can be used to set external starting conditions.
- (5) For stopping times requiring more than 30 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can provide a maximum time delay of 300 seconds in category 1, use a Preventa XPS AV safety module which can preventa XPS AV safet

Derating Curves

The derating curves for the drive nominal current (In) depend on the temperature, the switching frequency and the mounting type. For intermediate temperatures (e.g. 55°C), interpolate between 2 curves.
